DATA ANALYSIS: Energy Assessment

Welcome to the Energy Efficiency Challenge! In this activity, you will work in groups to analyse a data set related to the environment management of a smart hub. Your task is to answer a series of questions based on the data and create a cardboard prototype version of a data dashboard that visually represents your answers. This challenge will test your data analysis skills, creativity, and teamwork.

Tasks to Complete

Assign Roles	**As a team, discuss who will be assigned which role. Consider the strengths each of you bring to the group as well as what each role will be responsible for.** Roles to Assign: Data Analyst, Designer, Coordinator
Data Analysis	**Review the dataset and discuss the questions as a team.** Analyse the dataset to find the answers to the provided questions, noting your findings and insights.
Dashboard Design	**Plan the layout of the prototype dashboard.** Create the visual elements for your data dashboard such as charts, graphs, and tables to represent the data. Assemble dashboard using provided materials.
Prepare for Presentation	**Prepare to present your dashboard alongside any findings and insights you have discovered.** Ensure each team member knows their role in the presentation.
Present	**Present the prototype dashboard.** Explain the findings and insights discovered.

To succeed in this challenge, it's essential to collaborate effectively by working together and leveraging each other's strengths. Stay organised by keeping track of time and ensuring each task is completed within the allotted time. Use your creativity to make the dashboard visually appealing and informative. Finally, communicate clearly to ensure your presentation is concise and easy to understand.
